

**11<sup>TH</sup> August 2008**

*We began somewhat hesitantly on this occasion. A rather nasty type of summer cold had been about and in particular, Eileen was left with a cough which could really be a nuisance. She had a drink of water and we hoped for the best...*

Lilian: Good evening to you Salumet.

**Good evening.**

All: Good evening.

**I thank you for your welcome. As always, I am pleased to join with you once more. The instrument has been concerned about communication with us, but we will try to help in any way that we can. There are many of you in need at this time. Be assured that those in our world will draw close to you this night and we hope that you will feel the benefit of our love.**

Lilian: I'm sure we will.

George: Thank you. There do seem to be a few viruses and germs about at the moment.

**None of you are infallible!**

*Laughs*

**Therefore it is not unusual for you, any of you, to be plagued by human ailments. So do not be overly concerned. Each one of you finds strength in illness and overcoming many obstacles in your daily lives. This is part of the growth of spirit—but you fully understand this, therefore I will not repeat my words. This time, my dear friends, I wish to say to you just a little about your own growth which you know, each one of you, how much and how far you have travelled the road of *knowledge* and *Truth*. In your world, since the beginning of human existence, we hear so often: 'Show us the way.' Or: 'Why are we here?', 'What is the purpose of life?' You, my dear friends, have travelled with me along a pathway of discovery, of knowledge, of truth—truth that has always been. You have made discoveries, not only about yourselves, but about mankind and all those who exist within this planet. Not only that, you have been associated with mind connection, with planets further afield and this, my dear friends, you have all accepted, you have all gained from this knowledge.**

George: Yes. You have brought us riches beyond measure, Salumet, of which we are so appreciative. It is, of course, our earnest wish that we can place all these facts before others

and we strive to do this, and there is much enjoyment in that as well. So, thank you!  
**Yes. You have grown, but the purpose of growing spiritually is that you continue to expand that consciousness. We have spoken much about *Time, Energy* and *Growing* ... so many things over time have we not? What I would like to say to you all this time is: I would like to take you just a step further in your understanding. You know full well that when you discard these physical overcoats, that you are once more reborn to spirit. Of this there is no doubt within your human brains and thinking. You have accepted that mind belongs to spirit and that there is much that is open and waiting to be experienced. So we come to the first question placed before us: 'show us the way'. This, my dear friends, this is what I have tried to achieve with you over the many years that we have come together. (*Salumet first came through on 27th June 1994*) You have moved forward in your thinking, in your experience of spirit, of your understanding of all things greater than yourselves, because you know you have accepted that you are *more* than yourself; you are all as one, you belong to the wider picture of *Life*. So for you my dear friends, you *are* finding your way in beginning to know what the plan of life is. There is much you will never understand whilst here. This, too, we have discussed, but let us take the next question: 'Why?' Why is there existence? Why does mankind strive for this knowledge? Because, my dear friends, it is a natural inquisitiveness within him to find the reason why. That is why mankind in time past has become more interested in that which lays outside of this planet ... of this universe. That curiosity is a form of searching for 'why?' I wish to tell you that as you leave these many universes behind, you realize that still you remain within a 'Void'. Your scientists and those who are interested in other life forms are beginning to understand how little they know. Do you understand that each star, each planet, has a form of communication? (*Pause*) This we have not spoken of; but if you accept that all of life, all of consciousness is expansion and knowledge, then of course there has to be a form of communication—not in the sense that you would understand, by words, but by *energy*.**

**Each form of energy has colour—this we have spoken of briefly.**

George: Yes, and Bonniol spoke of a pulsing light (**yes**) which would be seen from out in space on approaching planets and suns. Is that something you ...

**This is an experience that is open to all within many universes, but I am trying to take you just a little further. As you leave behind those lights, those planets, those universes, still you realize that although you belong to the whole, you are still within a void. But within the void there is knowledge, knowledge of all planets, all universes, all things. This is a knowledge that is the 'WHY' of existence.**

George: Might I ask if the void is synonymous with Great Creative Force?

**The void is the result of the Creative Force. It is this seeking, the returning of the energy of the Creative Force. We are speaking of deep matters here.**

George: Yes. So, in a manner of speaking, the void encapsulates *all*.

**Yes ... yes. As you are one small planet, you are captured within that void, which again is only part of the knowledge; it contains many vibrations of energy and each vibration of energy belongs to colour. And as it is upon this earth and spirit, where communication needs a blending of energy, so too within the void are there communications with energy. Do you understand my dear friends? I do not want to take you too far without understanding.**

George: So there would be blending of energies within the void and that is how we should see communication.

**Knowledge ... that is where knowledge lies and that is only part of the whole. Do you therefore see the expansion, the continuity of life, the knowledge, the growth—all part of the Creative Force; and yet here you are, one little being and how really insignificant you are within the whole. Would you like to ask any questions?**

George: Insignificant and yet we connect throughout ...

**Yes. You can imagine yourself as the bottom of your big toe, reaching and searching for the top of the head. Can you see how mammoth that would seem?**

George: Yes. I have read articles about the question 'why?' Why are we here, why is the entire system here? And some authors have dismissed this rather flippantly and compared it to a 'free lunch', which isn't really an answer at all. But you have given us a wonderful insight.

**We are here in order for the Creative Force to *express* all things. For that ... I am searching for the word that you would understand—perhaps just to say that the Creative Force is looking for expression in all forms of existence. Therefore, to continue that expansion of consciousness, which in turn affects every being, every universe—all of existence. Do you understand my dear friends?**

Rod: I think this is far more complex than I'd ever envisaged, obviously. Does it need ... do you have to organize it? Does it organize itself? Do you have to control it?

**There are—and I use the word reservedly—there are laws to abide by, of course, but not in the way you would understand. Of course, there has to be structure, there has to be intelligence, and remember my dear friends these are earthly words which I use to really describe to you something that is really far beyond what you could truly understand.**

George: It seems to me that the Great Creative Force actions all this into growth (**yes**) in order to be able to examine its *expression* or grow further from that expression.

**There has to be expansion; that is why the Creative Force needs to have some form of expression. But that basically answers the question 'why?'—a question which has puzzled mankind and those on other planets for so long, because the understanding has not been available to them, although nothing has changed. It has always been, but consciousness has grown, evolution has changed planets.**

George: This question 'why?' has been examined, as you say, by our exploring outwards (**yes**), it is also being currently examined scientifically by a huge cyclotron (**yes**) constructed at CERN in Switzerland which has taken many, many years to construct and it is specifically to answer or attempt to find out 'why?'—and that construction is about to come on stream, I understand. Now I don't know where the Great

Creative Force would fit into this construction or perhaps it is part of the growing expression.

**Yes. I am aware of what you speak of, and of course any attempt to try to understand ... in our world can only be for the good, because it shows that mankind is opening up in his own consciousness to try—and I hasten to add, they will never fully understand, but they are *trying* to understand.**

George: And a refreshing part of this development is that it's seen to be huge investment for no, no monetary gain whatsoever (**yes**)—and this is rare in our history.

**That is why I say it can only be good, because it is affecting the consciousness of man; not the emotional being, not the monetary gain being, but because they are *seeking*. And remember, if you seek you will be given answers. You understand?**

George: Yes, and I know there are a number of scientists who'll be absolutely delighted if they find answers.

**Yes. The seeking is important.**

George: And their excitement will probably travel around the world.

**Anything to do with the 'way' and 'why' will always find ears to listen. They will also find ears that disbelieve or refuse to listen, but that does not halt the progress that is being made by many, not only in your world as I have said, but in other planets who are also seeking. Now my friends, I hope I have brought to you a little more to think about.**

*Affirmations*

George: Yes, that is a wonderful teaching for us. **It becomes ever *more* difficult when we reach this stage of explanation, because it is difficult to find words or expression to explain to you something so wonderful, so magnificent that it is just too much sometimes for the human brain to take and understand—but I hope I have brought it to you as usual in a simple and understandable way.**

George: Yes. And these words can be written down and they can be read through more than once if necessary (**yes**) and that always helps with the thinking.

**Yes. You tend to absorb that information a little more easily, I agree.**

Rod: Can I just ask a simple question? When we come back onto earth, they wipe the computer (*memory*) completely clean and we come back with no memories of our previous spirit life, or very little, although I understand on a previous talk you did say they were bringing children down with *some* memories. The question is, you talk about other planets all over the universes, do they have the same problem? Do they come down with the computer completely cleared, their memories completely cleared of previous life?

**That is part of spirit world, whether you come from this planet or another, those who reincarnate for whatever reason tend to have the memory erased, otherwise what would be the purpose of learning? But not all people have that memory erased—some are able to remember, but that is not the normal. Most people do not remember why they have returned, but it does not apply only to this planet. Is that helpful?**

Rod: It does, thank you very, very much. I didn't want to feel we were the odd one out!

*Chuckles*

**There is nothing odd, there is nothing special—you are just part of *being* ... on this one planet. You understand?**

Rod: And may I just say on my behalf how honoured I am to get this information from you—I know the rest are, but I feel very honoured. Thank you very much.

**I never cease to be amazed by this humility that each of you show towards my words. I should be the one who comes in humility. I am most grateful to you all that you accept not only my words, but that you extend to me much love, which in turn enables my own growth. And as always my dear friends I will take this time to say to you, I leave you with the thoughts of this evening, with my love, with my upliftment and with the support of all in spirit who draw close to you. I will let your evening continue.**

*General thanks from all present. It is remarkable to observe that there was not one single cough throughout the proceedings!*

George's notes:

*Clearly, this was one of those wonderful deeply philosophical teachings for which a few, more extensive than usual, scientific notes will*

hopefully help to clarify. As the scientist present on this occasion, I will do my best:

Space: We have come a long, long way since that period in the mid-20<sup>th</sup> century when the majority who taught physics strongly asserted that space was nothing and I recall, as a young student, being 'put down' for daring to think otherwise. There were just a few who thought that if we have to assign any properties at all to space then it cannot be written off as 'nothing'.

VOID: In astronomy, void is a term used to denote areas in the sky of 'cosmic nothingness', defined as 'empty space containing no normal and no dark matter'. Normal matter includes planets, stars and galaxies. Dark matter is matter that does not interact with electromagnetic force but its existence can be inferred from gravitational data. The largest void (recently) found is nearly one billion light-years across. Recent articles declare its reason for existence to be unknown. This, in astronomy, is a hot topic.

In classical physics the void is nothing (no matter or energy) and it remains a mystery.

[Quantum theory/physics: That tremendously significant and successful branch of theoretical physics based on the assumption that energy is comprised of quanta or tiny discrete units.]

VOID deduced from Quantum Physics: This is the exciting concept that connects strongly with the Salumet teaching. Quantum theory sees the void as a virtual mass of virtual particles that forever appear and disappear. This theoretical phenomenon is called 'quantum fluctuations'. It follows that there is an intrinsic energy within the void, and this is known as zero-point energy. This energy would be infinite if it takes the form of a continuum, and each cubic millimetre would contain enough zero-point energy to create a new universe! This derives from the theory. And a general statement of quantum theory is that every particle (of our universe) is a (waved) excitation of an underlying field. This is of course adequate description of how all solid matter of our familiar universe derives from the underlying energy. In 1948, Henrik Casimir had predicted from theory that two facing mirrors in 'empty space' placed one micrometre apart ( $1/1,000,000$  metre =  $1/1,000$  millimetre) will produce a disturbance in the quantum fluctuations that will pull the mirrors together. Only in this last decade

has nanotechnology advanced sufficiently to be able to use the 'atomic force microscope' to test Casimir's prediction. He is now seen to have been perfectly correct and zero-point energy is now a scientifically proven property of the void.

Therefore, the enormous energy of the void that has the capability of converting to matter, to which Salumet refers, has recently become a part of our scientific reasoning process.

27<sup>th</sup> May 2002: When we first got to hear of the term 'zero-point energy' or 'zero-point field', we checked with Salumet if this was one of the newly discovered energies that he had mentioned as a significant advance for humankind sometime earlier. His reply then: I have held back my words to you ... because did I not tell you that there would be many discoveries on this planet that were unknown to you at the time? And now, 6-years on, he evidently considers it the time to speak in some detail on this subject. Timing has always been important.

[Universes: Salumet has from time to time referred to a plurality of universes. This plurality agrees with 'string theory' requirement and while our universe is based on space-time, others will have different dimensional arrangements.]

CERN: Conseil Européen pour la Recherche (European Organisation for Particle Physics Research), outside Geneva is funded by 20 European member states including UK. The project began in 1952 with the construction of a small synchrocyclotron (1954) to accelerate and study colliding atomic particles, under the direction of Prof C Bakker. The current enormous accelerator is 27Km circumference, built into the countryside. A very special camera to record collision data of particles travelling near light velocity weighs 20 tons and has taken 10 years to build. It is the total assembly of a giant synchrocyclotron that has taken so many years to construct and it is about to come on stream. It is clear from Salumet's words that the void that envelops all contains more subtle qualities than will be found in the CERN project, and it relates quite closely to Creative Force = universal consciousness = God ... and the creation ~~~
