

## **A Learned Discussion of 'Alien' Character Possibilities:**

*This reply was written in response to an article which postulates the likely characteristics of 'aliens' in our universe based on the serious thoughts of scientists and fictional film sets!*

Forgive me if I smile at the idea of a '*learned discussion of mere possibilities*' when we already have so much actual factual data concerning so-called aliens. But the article does have two redeeming features—firstly, acknowledgment of the aggressive behaviour of Homo sapiens (which sadly colours our outlook towards others), and secondly, acknowledging telepathy as one possible means of extraterrestrial communication.

**Factual Data:** Telepathy is indeed a much favoured method of communication between planetary beings of this universe. Brain is a biological computer with capability to download thought-behind-words to its known language to be uttered by an entranced medium; thus overcoming language barrier. Mind / thought / telepathy are exterior to space-time and act instantaneously—are not governed by space-time rules; so there is no significant time delay. Absence of language problem and the absence of time delay make telepathy a much favoured means of communicating. The Kingsclere Group—a dedicated UK séance group, guided by Salumet of Angelic Realms—has had communication with similar groups of sentient beings on other planets for the past ten years and has recorded, transcribed and published all conversations. Our website: [www.salumetandfriends.org](http://www.salumetandfriends.org) has 18 pages including a 'Scientific Inquiry' page, plus audio links; and there is a free email updating service that goes out to readers around the world. A 466-page book 'THE CHRONICLES OF AERAH – Mind-link Communications across the Universe' was published in 2009, available on Amazon and Kindle. A further title: 'EARTH'S COSMIC ASCENDANCY: Spirit and Extraterrestrials Guide us through Times of Change' (2014) is to be published by White Crow Books very shortly; with Foreword contributed by Prof Ervin Laszlo and colleague Gyorgyi Szabo. The guided Kingsclere Group includes full-trance and partial trance mediums, clairvoyants, scientists and teachers. The group is not funded or promoted by any institutional body and currently is therefore quite understandably shunned by traditional news media and by mainstream science. This exclusion policy will change in due process.

**Extraterrestrial Visitors:** There are many variations of physical form, from 'mushroom' to fish-like with a number of ETs being bipedal rather like ourselves. Some are larger, some smaller, some hairy and blond, some less dense, but *always* their important development is MIND—without evolved mind and the abilities that go along with that development, none would be able to space-travel. Many space-travellers are interested in the progress of humanity and have visited Earth. The bipeds with three-fingered hands, inscribed on the Atlatl rock in the Nevada Desert, for example, came from a planet that they know as 'Crogaria'. The first task of many visitors to Earth has been to construct a large pyramid, using their own methodology—this to produce energy needs whilst here and to assist their

return journey. Early pyramids are hard evidence of their visits and have been radio-carbon dated to as far back as 30,000 years. We owe a huge debt of gratitude to Russian scientists (Profs Golod and Krasnoholovets) for constructing glass-fibre pyramids and studying the astounding effects of pyramid-generated energies; also to Dr Sam Semir Osmanagich for his valuable excavation work and study of the Bosnian Valley of Pyramids, and for his collaboration with European and Russian analytical laboratories. Following the visit of three members of the Kingsclere Group to the Bosnian Pyramids in October 2013, Dr Osmanagich has kindly contributed details of his ongoing project for inclusion in our above named new title.

These are exciting times of change. Old standards have had their day, and mankind's early history needs re-writing; hence the understandable reluctance of scientific institutions, world governments and attendant news media to account the new criteria. The truth now emerging carries with it the prospect of wondrous cosmic alliance, in the midst of which good will prevail. It is time to acknowledge that we have real friends out there—and they are well beyond the mentality of mining our minerals and plundering our planet!
