

SALUMET — 8th February 2016.

At the outset, Eileen had a tickly throat and was coughing. Salumet quickly dealt with this. Our prior conversation had included the mention of surgical procedure updates and the news that ‘hand transplants’ should be available from April onwards; also ‘head transplants’ were being seriously considered following experiments with monkeys:

Lilian: Good evening Salumet. Welcome to you.

Good evening.

All: Good evening.

Coughs

Lilian: Would a drink help?

I am dealing with it. I am happy—

More coughs

I think it should be okay now (oh good). As always my dear friends, I am happy to join with you; and again, those of us in spirit have been listening to your conversations. As humans, you always will have had many doubts about advances in your world. Remember how we discussed about transplants of the heart and how our comments helped many of you at that time. I wish only to say that these things are never clear at the time of speaking about them. All I will say is that advances in medicine will always be taking place and sometimes it may not be to everyone’s agreement, but still you have to allow these things to advance. I of course see a much wider picture and have to this time in your universe, been aware of many changes. I will say to you my dear friends, that continue to question whatever you will, because in that way you will surely for yourselves reach the correct answer. We do not come to tell you what you should think—that, my dear friends, is entirely up to you. But I want to reiterate this evening that I have indeed come to you in the name of truth. That is what I have always stated. My message to you has always been simple. I try to bring to each one of you ‘love’, ‘understanding’ and many of the qualities which make for a good human being. Your understanding sometimes takes you too far from the *simple* truth, and I wish only to say to you this time that love, understanding and

allowing spirit to help you at all times, that other gifts that I bring to you; but again, I offer them to you this evening. But when you leave this room, you will *feel* that love of spirit, you will have understanding of your fellow man, even if you do not fully agree with him. You have to allow this planet to evolve, because that is what is happening all of the time—that this planet and many, many others are evolving at the same time. So I would like you my dear friends, when you leave this room tonight that you think about that simple word ‘love’. It is a small word in your vocabulary but it is of great magnitude for all. This is what I ask you to do this time, my dear friends. Do you have any questions for me this time?

George: I think I am right in saying how the steps on our way forward, are as your words very strongly imply—are an important part of our evolution.

Yes, and for your own spiritual development; after all, with your mistakes in your lives, you learn so much do you not?

George: Indeed (**yes**); with the thought about head transplants, I feel so sorry for the monkeys, who are being experimented on.

Yes—yes, and you must hold those thoughts at all times, but as we have spoken of in the past, you do not know the reasoning behind all of these things. But yes, of course you must have love for all of the animals. It is never right to create these conditions with the animals. So I am in agreement with you that it is not always suitable. I cannot say more than that at this particular time (thank you). After all, humans and the animal kingdom belong in this planet with equal rights (yes).

Lilian: We use—it’s quite a hard one—thinking of the animals in the experiments.

Yes, but again my dear friend, when you do this, you are thinking in the moment. You do not see the wider—

Lilian: Yes, the bigger picture—

After all, there was so much outcry when you had the first heart transplants, and people were saying that it must have been their time, but no, you humans as human beings can—shall I say?—make a mess of your lives (yes). You create situations that are wrong, and create ill health from within the body when in fact the body

should have remained healthy. You must think along all of those lines before you make criticism.

Lilian: Well I know when I was facing operations on my heart—it did worry me about the animals that would have been used, so I defend them in my way.

But today those animals would say they were grateful that they could have helped, if they could use human words. That is what they would tell you.

Lilian: That's lovely.

George: That's interesting.

Jan: As you mentioned monkeys (**yes**), are there things in their consciousness—of the monkey involved (**yes**),—because they can see the bigger picture from spirit. Would they not see it as —**A gift to humankind?** (Yes.) **That is exactly right; and that it is always difficult when we are trying to explain why these things happen—of course it seems horrific and of course we do not wish harm to anyone—animal or man. You must look to the wider picture of this.**

Jan: Yes, because in my own little world I can imagine—like contracts between species almost—spiritually being drawn up, but it is for the betterment of mankind, but who knows that that medical advancement may help the animal kingdom in return at some later stage?

And also, when the human has received, not only from animals but from other people, whatever the transplant may be, it has allowed that person to grow—the one who has donated; but also it has given more time to the person to whom the transplant has been given (yes). It has given that person time to look at his own spirit, and where perhaps he may have gone wrong in this lifetime. So you see there is never one clear message.

Jan: No, not at all—no, even regarding the eating of another animal, I was reading that the animal kingdom; although they wouldn't really like us to eat them—but because a vast majority of them also eat members of the animal kingdom, it's a gift—really, when they go back to spirit as one consciousness, they really—how can I put this?—there's an acceptance.

Yes—yes, you have to understand that, from spirit, we are looking at everything in much more detail (yes)—yes.

Jan: Well they prefer that we didn't eat them *but* they understand why—that's the main thing.

Yes, but of course we do know and understand that the Earth is not a perfect place (no), neither are those animals who exist upon that planet. So, again I say to you my dear friends: be careful in your judgements.

Jan: Yes because some of the animal kingdom just literally kill for fun (**yes**). So yes, we shouldn't judge one another at all.

George: Perhaps an extreme example is: during World War II, a thriving rabbit population became (in UK) a very important food source. It certainly increased thought that there might be on Earth a certain gratitude in relation to the rabbit, for the service given. It was certainly appreciated by humans at the time.

Yes—yes of course, and you have to remember you all belong to the same energy—that when you leave this Earth plane, you will all return to that energy that you know as the Great Spirit. So whatever is happening in your world today, I say to you my dear friends: analyse if you wish, but keep your hearts open to all of the things that are going on around you. Remember the word 'love' and it will carry you through, no matter what conditions you may come across.

George: Perhaps one more difficult one to think about is a technical consideration. We are all familiar with the Galileo telescope based on the convex lens that enlarges our view of the universe and matter. I have recently read a report on what is called the 'Santilli' telescope, which is based on the concave lens, and designed for revealing, not matter, but antimatter—antimatter based on antiparticles.

I would only say this to you my dear friends: if there is matter, there is always antimatter.

George: Ah! Well that in itself is very interesting—

Yes, because you always have to have a balance.

George: Yes, it has been rather conjectural.

Yes, but just keep that in mind about matter. There is much you do not know yet and much for this planet to find out.

George: I understand the digital camera is able to photograph images from the Santilli telescope.

Yes—but do not forget also that they are being helped by us from spirit.

George: Yes of course.

Yes, all things that happen have been helped by our world in some way or another.

George: So this is another part of evolution on our way forward—

Yes—yes, of course. Now, are there any more questions this time?

Jan: I do have one from Richard, but I feel at this time it is probably not the right time to ask you. At the end of our discussions—he wanted to know, regarding the ‘missing link’ in the human chain of evolution—

Yes, do you feel that there is only one missing link?

Jan: No, Richard suggests that there are more than—quite a few actually that we haven’t had answered.

Yes, you are at the very beginnings of discovery of your planets. So yes, I will say to him: he is right in his thoughts (yes). Yes, there is not just one missing link.

Jan: No, he mentioned to me at least three that he was aware of in the chain that they haven’t lined them all up yet, but—

As the planet progresses and evolves, you do not get the answers to the questions. The questions become greater—that is what you have to remember also (yes). As you answer one question, another one arises (yes), and that will always be whilst you live on this planet.

Jan: I think he, well I know he is extremely interested. His main question to himself is: were we engineered in some way—that we don’t appear to have evolved from the ape, that they say we do. I’m not quite sure what he’s read up to, but were we engineered in some way by ETs?—that was his question.

I know where he is going, but at this time I will say to him ‘no’, you have not been engineered in the way that he means.

Jan: Okay, thank you.

George: I have another question regarding the final disappearance of Atlantis. There is very good evidence that this has been accompanied by ‘climate change’, and quite a marked climate change—in that in Siberia, there are areas that are now icy tundra—were abundant grasslands supporting thousands of mammoth, woolly rhinoceros and sabre-tooth tigers—quite large as well as small animals. But at the same time as the final disappearance of Atlantis, there seems to

have been this huge climate change, which has caused these animal extinctions. So again—part of our planetary evolution—

Yes of course, there is so much you do not understand, and it is futile to try to explain what has already gone. Remember I have said to you: you must go forward—you must look forward and can’t look backwards. But yes, there have been many changes in this planet, as there are in others, but you will never come to the end of wondering. But I understand why, as human beings you are so curious, when all you should really be striving for is the beauty of your souls and the beauty of spirit when you return to us. All of life seems so complicated does it not?

Jan: I wonder if that’s one of the reasons why humans are inquisitive and so curious about the past?—is it because the answers are moving forward sometimes?

—Not at all (no?). You do not make the past to move forward.

Jan: No, I know that, but we all seem to be wired in that way, where we’re all looking for answers from the past. Why is that?

I will just say and call it the word you used: ‘just curiosity’. You have been endowed with free wills which includes curiosity—that is why (I see). And there is no harm in trying to find about the past, but what I am saying my dear friends, is that you must not allow it to take precedence over what you should be seeking. That is all I am trying to say.

George: Perhaps it helps to colour our impression of planetary evolution, but yes, I fully accept what you say—

Yes, but there is no harm in doing so. It is entirely up to individual’s free will—yes.

Jan: Children are also very, very curious, they are closer to spirit than we are and we’ve all had this—especially the little boys—amazing curiosity and eagerness to learn about dinosaurs. It’s really *the* thing to learn about when you’re aged six (yes), so I think there’s no harm in being childlike—

Do not forget that the genes retain memory (yes). You must look to that source as well—yes. Yes, there is no harm, but my wish for all of you is that you look forward, that your spirits soar, that it becomes imbued with all of the knowledge that you need to grow spiritually;

after all, that is the main objective of you being here—to love each other, to change what is wrong and to go forward.

Jan: When you say ‘changes’, what sort of changes?—to change what is wrong within ourselves?

—Firstly, and then in your societies—yes.

Jan: —because obviously you can’t change society if you’re not prepared in yourself, it seems to me.

Yes, that is correct—that is correct.

George: Yes, an area that sorely needs much more love at the moment is the country of Syria; and there would appear to be six foreign nations conducting a war in their homeland **(yes)**, and driving immigrants to other places—which is a natural thing—I think many would run away in that situation **(yes)**. So the immigration which many simply see as an isolated problem is really very much of our own making.

There is no doubt that in the world you inhabit this day, that there is ignorance to ‘within’, there is hatred, there is all sorts of negative feelings which need to be obliterated. But it is still part of the planet’s evolution, of this there can be no doubt, but that should not stop all of you sending out love for all people, all those who suffer and for those who are committing terrible deeds, each to the other. Yes, there can be no doubt that the world in certain places is in turmoil, but it has happened before and I can only say that until each Earthly individual finds in their own hearts the love of the Creator, we will always have some problems. That is why it is important for each and every individual to give of themselves with love. I will never tire of using the word ‘love’ because that is the very core of your beings. Do you understand my dear friends?

George: Yes indeed. Yes, I think of this as a basic essence.

Yes—yes. If you can reach into your own hearts and spirits, you can make this world a much safer and much more loving place. And I know to many, it must seem like that is an impossibility. I sit here with you my dear friends and tell you: it is a possibility. And now, I feel I will take my leave this time. I just wanted to reiterate to you all, what love can do for each and every one of

you, and to never forget that that is the very, very deepest part of your being.

Jan: May I just take this opportunity—I would like to say ‘thank you’ for the love and help I have had over the last couple of months **(yes)**. So I thank you.

All of you are loved and we try to help and uplift you at all times. So as I leave, again I enclose you in my love and leave you feeling uplifted—until we come together next time—I will leave you quietly.

General appreciation and thanks

Following Eileen’s return, there was a brief visit from Cho:

Lilian: Hello.

Hello—hello.

Jan: Hello—I knew it was you. I could see you above my head.

I coming next time—tell you little bit about me.

Welcomed by all

—Next time, okay?

Jan: We look forward to that.

I was helping this time.

Jan: Are you able to help Eileen come back?

No, I just know—she ready to talk.

Jan: I see.

I come next time—ciao!

All: Ciao!

Jan explained that she could see him—what he looked like when in Mongolia—cleft palate, round face, thick set, very short and with a crop of black hair.

Next, a brief period of clairvoyance via Eileen, with Jan’s father letting Jan know that he is still around and commenting on her business accountancy—“You make your own lottery!” And Eileen could see him placing their old money box on the table in the middle of the room. There was some nice humour in this, and he was encouraging Lilian to spend a little of her money and “Buy yourself a nice cake!”

NOTES:

1: Santilli Telescope: The data on this item was sent to us by a reader in Australia. Thank you Emmanuel! Dr Ruggero Santilli is highly regarded and has in the past had Nobel Prize nomination. The telescope or a pair of telescopes are able to reveal intelligently moving objects in the universe that are otherwise invisible; also likewise, entities in Earthly domain. It is expected that this step forward will achieve much.

2: Warring in Syria: Apart from the foreign nations actually waging war and supplying the arms being used (U.S., U.K., France, Russia, Turkey and the mixed-nationality ISIS), other countries named on the Internet for supply of arms are: Iran, Qatar, Saudi Arabia, Libya, Lebanon and Croatia. Well, it all adds to the turmoil.

The news that it is planned to end hostilities within just a few days is welcomed news indeed—perhaps the prayers of we ordinary people are being visibly answered at last!
