

SALUMET — 16th May 2016.

Audio link:

http://www.salumetandfriends.org/resources/2016_05_16salumet.mp3

George: Good evening Salumet and welcome to you.

Good evening.

All: Good evening.

It gladdens us all when we see such dedication as you provide within this room. I would this time, my dear friends, just say to you that however you feel about the state of your world at this time, and it would seem that there is always strife—I want to still reassure you that we are doing all that we can to bring love and peace to all people. We do not wish you to become despondent, because that would not help any situation. So be reassured, my dear friends, that with your help and the help of many others in this world, we will come at some stage to a more natural and loving situation here.

Paul: Thank you—yes, I think there are positive little ripples and signs. It's slow, but it's slowly changing.

Yes, and that is what we still need to do—to have positive attitudes, all of you. I would wish to just say to you this time that even your scientific world is changing slowly, that their doubts are a little less than they were ten of your years ago. So in this respect it is a good sign that there are changes happening.

George: Yes, there is one gentleman who is basically a chef, and he is conducting a campaign to teach better food values in schools to young children, and this is something that at last is coming to the fore.

Yes, you will find that over the next two of your Earthly years, as I have said with your medicine, so you will now find that the scientific world will make discoveries that they until now have dismissed as not ur—

George: Yes, I would like to speak with you on that later, Salumet.

You may speak with me now.

George: Ah, well—we have recently spoken of the 'Santilli telescope' and the observation of an anti-matter universe (**yes**). You suggested I might think further on this matter (**yes**). Well, my

physical thinking is rather like this: The aether plus its mode of transmission governs the *speed of light* to this planet. Its mode of transmission has been described as torsional or twisting, and this controls the speed of light until it strikes matter and transfers its energy to that. And thinking physically on this, if we consider a single twist, if it goes further to a *break point*, it will produce a clockwise part and an anti-clockwise part, which might suggest matter and anti-matter. Anyway, the aether represents a stage in the production—the creation of matter, and there seems to be good evidence for an anti-matter universe. And the present scientific community is aware and acknowledges that their reasoning leaves a large part of the universe unaccounted for. The anti-matter universe would contribute to that part which is not at the moment acknowledged. I would be glad of any further commentary you might have on that Salumet.

Yes, I understand what you are saying, but to simplify it for the others, it is not as complicated as it may seem. There will never be a full understanding with your scientific world, but it indicates to us how much knowledge they are beginning to gain. Always I have told you there is plus and minus in all parts of life, and this applies to the matter of the universe and the universes further afield. Of course, I would say that your scientists are dealing very well with the information which is being fed to them from our world. That is the first step I have to make to you.

George: That is very nice to know.

They would have no knowledge at all if some of it was not coming from us. You know and understand that all of your life is dependent upon being spiritual beings. And when you speak of the aether—of course, it is the most important part in gauging how the rest of the universes work. But I feel for this time, your scientists need to remain uncomplicated with their visions. Do you understand?

George: Yes, I see.

And allow more knowledge to come from us, which would then gain *them* more knowledge, here on this Earth.

George: Yes, and it would speed this process up if (**yes**) more of them went within and—

Yes, and listened to that still voice; yes of course it would help, but although in times past I have said almost they are a little ignorant of all that is happening. We have now reached a stage where some of them are beginning to listen—to work out for themselves that information, and to define what it is all about. But they will never have the full answer, not whilst you remain upon this Earth plane.

George: Yes, and would you agree that the aether plays a major role—

It is a natural role—it is not something that is made, it has always been.

George: Yes, it plays a major role in the Creation (yes) and a major role in—
—existence.

George: Yes, and in controlling the speed of light. —**And that also, yes, I would agree with you on that one point (yes, wonderful). Does that help you?**

George: That clarifies very nicely, thank you.

I hope that the others have understood, because you are a gentleman of much wisdom but it is not always easy for the others to fully understand your questions, but we are grateful for them.

George: Well thank you. Well, I'm writing this book on the aether (yes), and it may well be that it will be beyond a few people, but I hope that some will find it of interest.

Yes, we can assure you there will be interest.

George: Oh thank you.

We thank you, my dear friend, we thank you for all the good work that you have done—the words that you have printed, and many people have come to know just a little more of the life that continues.

Mark: I believe you told us over a year ago about the discovery of more planets and that's come to fruition—they announced that about a week ago I think.

Yes, I am always happy to hear that our information materialises for you, and that you know that the words that I give to you are made of truth; we thank you for that.

Serena: Could I ask a question slightly related to George I believe, about Adamantine Particles (Yes). What are they?

What are they? They are made from the substance of all life—if that is a simple answer for you.

Serena: Because they're very, very, very small, aren't they?

Minute, I would say—is the word that I would use. Yes, they are part of existence. I do not know how else to explain it to you—yes.

George: We respect that what comes to us from you Salumet, is truth (yes). The generation of that truth, one could almost say, is a 'feedback process' from all knowledge that has been gained from this and other planets in the universe (yes) and other universes, I believe you have said in the past.

Well you see—all of your world is never still. It is evolving in the same way as you are, and mankind is a curious creature. He forever seeks answers to many things. Sometimes these questions are irrelevant to your spiritual growth, but we understand that, because of the curiosity, you like to ask more and more questions. The question, my dear friends, I would wish you to ask is: how do we become more spiritual whilst in the human body? That is the important question. Do you understand?

Natalie: On that note, at the beginning of the year, I had an experience in this room that I hadn't felt before—like I wasn't here (yes). Like my heart was bursting out of my chest, and I felt like I was being pulled back somewhere and it was weird, it's like I could just about hear, in the distance, someone in the room like I wasn't quite here, but I was here. I wondered if you could clear that up—

Yes, it was part of your development, it is part of the spirit separating from the body; and we know you found it a little uncomfortable at the time. So we try never to—what is the word you would use—to hold that someone would feel uncomfortable? But indeed, it was another step in your own development (thank you).

George: I guess the main thing is a going within to see what we can receive—but exercises such as we had last week would also help to develop this. **It would help each one of you to develop in your own individual ways. After all, you are each individuals and although you come together in love and peace, in your daily lives you are very different, but that makes no difference to the**

spirit; so yes, you must go within if you wish to be in more contact with the spirit. I find sometimes it difficult to explain that you are all *one* at the moment. You *are* spirit and yet you have this human body, which sometimes causes you and your minds to become a little cluttered. So when you go within, the spirit becomes freer. That is the time that as individuals, you should ask your questions, and you will receive your answers—maybe not exactly what you want to hear, but still it is your own spiritual answer.

George: And I think I would be right in saying that you Salumet are part of that oneness, because you receive so much from everywhere and recycle it.

Ah, that is a very good way to put it. I have never been called 'a recycling bin'.

Hearty laughter

So I will remember that my dear friends, yes. Recycling—I must remember—

Laughs

George: But do you regard yourself as part of that oneness?

I do. I am part of many parts that is a whole. And again, we are going to a subject which is a little complicated for the human mind (yes). But yes you know, and I told you from the very beginning that I speak as a conglomerate of beings, and that is still true today.

George: So can we see a conglomerate of beings as—

You can see a conglomerate of being as a universe of Truth—the University of Truth, if you like.

George: —A collection of parts, or is that putting it a bit too physically?

I think for understanding that is a good way to put it—yes—yes, and parts which have never existed as humankind, and parts which *have* existed; but as a whole we are just bound in love and existence.

George: You say 'and parts that *have* existed'? —**In some form—yes, have existed in some form. But again, what is important is the truth that we bring to you. I hope that is helping you.**

Paul: Yes, it widens the picture a little more, and I just had the thought: maybe it helps the *whole truth* that you've got—you're a conglomerate with formless beings and those that have *had* form, that no longer have form—

Yes, but not form as you would understand. That is why I say it is more complicated than words can say.

Paul: Right—so they wouldn't have been human. **No.**

Paul: But yes—some form—it gives us something to go on.

It is something for you to consider—yes.

George: Would any of those forms be physical? **No.**

Ben: Salumet (**yes**)—when we pass to spirit, we sometimes take on a form of how we looked when we were on the Earth I believe—for recognition purposes.

Yes, when you pass to spirit you mean?

Ben: Yes, so when we pass to spirit and if we were to call upon you for a conversation, how would you appear to us?

I can take—I can be transformed to the form of a human in order to teach on the lower levels, but I only come so far, so often. There are many teachers in our world who are prepared to teach those who have questions. It is not something that I do with regularity, but if you were to call upon me whilst in spirit, you would find that your answers will come (thank you). Is that helpful to you? (yes) There are many teachers in spirit and there is much you can learn when first you take your place there. But the others understand this, do you not?

Paul: Sort of—sort of, I think, in the sense that there're vast 'libraries' if you like—and teachers; and you *know* that the truth is *there*, as opposed to on the Earth where—

You will no longer doubt the truth once you have returned to spirit. After all my dear friend, you are returning *home*. Nothing will seem strange (that's right), so all will seem familiar and you will feel boundless love (yes)—unlimited love.

Paul: Yeah, I guess it's like you get beautiful days on the Earth, but that's not the norm usually, but they're probably just small compared to in spirit. **Yes, I would say that in comparison, a beautiful day here would seem very hazy in spirit. It would seem dull, although, as human beings, you would think it a most beautiful day. The colours—everything about spirit is—I don't know how to explain it to you properly. I can only say the beauty will astound you.**

Paul: Yes, I think we can get the gist, but until we experience it *again*, we won't know for sure.

George: Perhaps we should think in terms of a beautiful summer's day here being a less-than-halfway stage in beauty.

Yes, although it is beautiful to human beings, to us it seems a little dull—yes you are correct—yes.

Paul: And yet, for many, even though the learning can occur as you say, on that side, many will choose to come back here. It almost seems—*why* would you choose to come back to the very hazy place at the best of times? But I suppose you do get the *focus* for certain lessons perhaps—

Yes, always the choice remains with the spirit. Of course, some are not quite so keen to return too quickly, but that is their free will and that is always respected. But there is advice from those teachers in our world who will offer guidance and love. And let me say to you all, my dear friends: you never return to a lifetime unless the decision has been made by you. So never feel that it is something that you *must* do—it is something that you have decided is right for the growth of your spirit. And after all, that is what these lives are about—the growth of your spirit and returning *home*.

George: Yes, it's a growth of spirit and not just a retrograde step!

Yes. No, you must never look upon it as that.

Ben: Would we have the chance to reincarnate onto a different planet, or will we always be human when we reincarnate?

There is much discussion about this that you can return—energy can be transmuted, but I would say: no, you will not do that. You will not inhabit another planet in that form. And I know there is dispute about this, but that is my answer to you (thank you). Have you more questions this time? No?

Pause

George: There is just one, which probably has a negative answer. You said at some stage that a new energy would be forthcoming from the sea (**yes**). One gentleman seems to have worked out a process for making alcohol out of seaweed, but I don't think that's what you had in mind.

Well, I thank you for the information, but no I was speaking of benefits to mankind in general and not seaweed drink. Although I must say that

the seaweed in your seas can be beneficial—yes. But there are many things happening in your world. As I say: people, although it may seem that all is going wrong, it is not my friend, it is almost like a *cleansing*—a cleansing of the soul in order for you all to move forward.

Paul: Ah, that's a lovely way of looking at it. It does feel like that—this year and the last few years.

Those of you who are sensitive to spirit would see the difference, although many people with negative thoughts would see only the 'unhappiness', the 'wars'—the negative stuff in your world. But keep positive my dear friends—keep positive on all matters.

Paul: Yes, it's kind of a detox—you have to get rid of all this stuff, but you have to get it out first, so it's coming out isn't it? (**Yes**)—we're seeing it in the media.

The more 'sensitives' we have, the better the understanding will become. So I leave that all with you, my dear friends, and hope that it has given you a little food for thought.

George: Yes indeed! I feel this has been a wonderful evening, which has taken us further forward and I'm sure it will be of great interest to many of our readers (**yes**), thank you Salumet.

I thank all of you my dear friends, I thank you all for your love, for your dedication and I wish you could see the growth of your own spirits since first we met; you would be surprised.

So I leave you now, cloaked in my love and in the love of those here in my world, until we meet once more.

George: And I'm sure we send our love to you all in your world—thank you.

General agreement and farewells

Following Eileen's return, there was quite a detailed clairvoyant message via Eileen regarding a friend of two of us now living in China. Then a brief visit from Cho, who it was that had brought the information to Eileen—audio link:

http://www.salumetandfriends.org/resources/2016_05_16-Cho.mp3

Hello!

All: Hello Cho!

I very pleased I brought that one—very pleased
(ah).

George: Yes, we're very pleased, because it's been a wonderful evening with Salumet.

I'm very pleased.

Paul: Was it a lady who brought the message for Jeremy?—or—

No—no lady—one of his helpers (ah), ***yeah—looking after him—yeah—man called John.***

Pause

Who's got a broken bicycle?

Paul: Me actually—I've been working on a few things. The gear cable's broken and it needs new tyres.

Yes, someone's saying: watch your finger.

Paul: Oh right! Watch my finger (***yes***). Okay, yes I'll take extra care, thank you.

George: A finger can be easily nipped between tyre and wheel.

Paul: Yes, it is actually—getting them off was.

You look after your finger.

Paul: Ah—thank you.

I sound more Chinese tonight!

Laughs

I look after my lady tomorrow (Jan).

Paul: Oh yes—well done. Jan will be very pleased to hear that—we can pass that on.

It's not favouritism you know!

Laughs

Paul: She needs it at the moment—yeah.

Okay, I go.

General thanks

There followed a further period of clairvoyant messages via Eileen, including one very specific one for George. 'Someone has a door that's not fitting very well.' Well the previous day the greenhouse door was having quite an overhaul. It now opens freely, but the advice given was that one particular pane of glass with a crack needs to be replaced. How very true—absolutely spot on! And thanks.

NOTES:

1: Matter and anti-matter: What follows is intended to bring the more general reader up to an understanding of that highly technical question to Salumet concerning matter and anti-matter. This follows a first mention of the Santilli telescope in a question to Salumet on 8th February. Salumet's statement at that time was: 'I would only say this to you, my dear friends: if there is matter, there is always anti-matter—you always have to have a balance.' This is the invention of Dr Rugerri Santilli that actually reveals (and proves the existence of) an anti-matter universe. So it should help the general reader enormously if we begin by considering the nature of waves, beginning with water waves:

Waves on water: We are all familiar with ocean waves. They are clearly visible, they travel slowly and they have their energy, which they give up on reaching a coastline. This energy transfer is apparent when we see shifting sands and cliff erosion.

Sound waves in air: This is a compression wave with alternate compressed and reduced pressure parts. Sound waves travel very much faster than water waves—around 340 metres per second (but with dependence on temperature, humidity etc). Just like water waves, sound has energy which is given up when it strikes a surface. If that surface happens to be our eardrum, then it vibrates the eardrum and that is the basis of our hearing ability. It is possible for extremely loud sounds to knock down walls and to shake machines to pieces. So in these cases, the energy transfer is well demonstrated. We must bear in mind that both water wave and sound waves are entirely physical involving physical media through which they travel.

Light waves in the aether: Light waves are very, very much faster again than sound waves—almost 300 million metres per second (186,000 miles per second). A reason for this is that the aether is non-physical so that the travelling light wave has no weight to shift. An important thing is that just like sound waves one can see it as units comprising pressure and reduced pressure parts—or each part may be a twist (torsion)—and Professor Ervin Laszlo makes a strong case for this—or it may be both. But whatever the structure of the light wave, the important thing for us to observe is that just like water waves and

sound waves, it carries energy which transfers to the surface that it falls upon. When that surface is our skin, it produces sunburn. When that surface is dark, the absorbed energy makes it hot. Lighter surfaces reflect more energy and that is why sunhats are usually white; so all these waves have the common feature of carrying energy that is given up on reaching a material surface, and the understanding of one type of wave should help us to visualise another.

The aether: The aether is a universal (non-physical) essence that has several functions: (1) It conveys sunlight and starlight to this and other planets. (2) It sustains life on this and other planets. (3) Aether has an essential role in the creation process—a half-way stage between spirit and matter. (4) Matter and anti-matter are produced simultaneously, and there have been several references to the fact that this is so.

These details lead to the conclusion that there is indeed an anti-matter universe. This is claimed by Dr Rerrero Santilli and is confirmed by Salumet.

Bio-fuel from seaweed: Whilst the question as placed was really seen as a means of making bio-fuel, several sources see the process of ethanol fermentation as a way of making wine. So it is understandable that Salumet's reply relates to winemaking.

Teaching children food values: It is to Jamie Oliver's credit that he conducts a number of significant campaigns. One recent campaign is to teach the value of food to young children in schools. This should be very useful since so many begin with poor diet that often continues in later life.

[No meetings for 23rd and 30th May, on account of Eileen being away and UK Bank holiday. Next meeting scheduled for 6th June.]
